1. About the Organization

Google's software engineers develop next-generation technologies that change how billions of users connect, explore, and interact with information and one another. Our ambition is to bring world-class scale and resilience to every solution we ship.

2. Key Roles & Responsibilities

- Design, develop, test, deploy, maintain, and enhance large-scale distributed software solutions.
- Manage individual project priorities, deadlines, and deliverables across multi-functional agile pods.
- Write robust, testable, and efficient code in Java, C++, Python, or Go.
- Collaborate with Site Reliability Engineers to monitor telemetry and scale global backend services.

3. Technical Requirements & Qualifications

- Strong foundation in Data Structures, Algorithms, Complexity Analysis, and Object-Oriented Design.
- Proficiency in at least one modern language (Java, C++, Python, Go).
- Working knowledge of relational/non-relational databases (PostgreSQL, Bigtable, Spanner).
- Familiarity with cloud microservices, Docker, and CI/CD pipelines.

4. Selection & Interview Process

- Step 1:** Round 1: Online Technical Assessment (Data Structures & Algorithmic Problem Solving)
- Step 2:** Round 2: Technical Interview I (Data Structures, System Fundamentals & Algorithms)
- Step 3:** Round 3: Technical Interview II (Architecture & Object-Oriented Design)
- Step 4:** Round 4: Googleyness & Leadership / HR Fitment Round
